Building sales performance dashboard

Problem Statement

You are a Sales Analyst for a retail chain. The sales director wants to monitor revenue, profit, product performance, and regional sales through a single dashboard. Design an interactive sales dashboard that supports data-driven decision-making.

Methodology / Steps Followed

Step 1: Data Collection

- Obtained Walmart sales data from Kaggle datasets.

Step 2: Data Import

- Opened Power BI Desktop.
- Imported all datasets using the **Get Data** option.
- Loaded CSV file into Power BI.

Step 3: Data Cleaning and Transformation

- Removed duplicate records.
- Handled missing values.
- Converted data types where necessary

Step 4: Dashboard Development

- Created KPI cards to display Total Weekly Sales, Average Weekly Sales, and Total Holiday Weeks.
- Developed a Column Chart to compare Weekly Sales across different stores.
- Created a Donut Chart to analyse Weekly Sales during Holiday and Non-Holiday periods.
- Developed a Line Chart to visualize Year-wise and Monthly Weekly Sales trends.
- Created a Scatter Chart to examine the relationship between Temperature and Weekly Sales.
- Added interactive Date and Store slicers to enable dynamic filtering across the dashboard.

Output

- Opened Power BI file.

- Loaded the dataset.

- Transformed data And applied Cleaning where ever Necessary.

- Developed the Power BI interactive Dashboard

The dashboard enables management to monitor business performance and make data-driven decisions effectively.

Result

- Successfully developed a interactive Walmart Sales Performance Dashboard using Power BI.
- Enabled users to monitor weekly sales performance through interactive visualizations.
- Provided clear insights into store-wise sales and holiday versus non-holiday sales.
- Analyzed yearly and monthly sales trends to identify business patterns.
- Explored the relationship between temperature and weekly sales using visual analysis.
- Implemented interactive slicers for easy filtering by Date and Store.
- Created a user-friendly dashboard that supports better business analysis and data-driven decision-making.

Conclusion

The Walmart Sales Performance Dashboard was successfully developed using Power BI to transform sales data into meaningful and interactive visual reports. The dashboard provides a clear view of weekly sales performance, store-wise comparisons, holiday sales analysis, and sales trends over time. Interactive filters and visualizations make it easy for users to explore the data and gain valuable business insights. Overall, the dashboard supports effective decision-making by presenting sales information in a simple, organized, and user-friendly manner.

Learning Outcomes

Through this project, I learned:

- Gained practical experience in developing interactive dashboards using Power BI.
- Learned to create and customize different visualizations such as KPI cards, line charts, bar charts, donut charts, scatter charts, and gauges.
- Understood how to analyze sales data to identify trends, compare store performance, and evaluate holiday sales.
- Learned to use slicers and filters to make dashboards interactive and user-friendly.
- Improved the ability to present business data in a clear and visually appealing format.
- Developed skills in converting raw sales data into meaningful insights to support data-driven decision-making.
